

GURSIMRAN SINGH

SENIOR PRODUCT MANAGER

+91-7066534321 | gursimran63@gmail.com | linkedin.com/in/gursimransingh-product

Product Manager with 7+ years of experience building and scaling SaaS products across HR Tech, CRM, and Intercompany Accounting domains. Proven track record of driving revenue impact — including contributing to \$2M+ in ARR at Blackline through a differentiated multi-vendor tax engine integration. Strong expertise in 0-to-1 product builds, roadmap strategy, OKRs, PRD writing, stakeholder management, and end-to-end delivery. Experienced in shipping AI-powered features, defining API integrations, and leading cross-functional teams across global enterprise environments.

PROFESSIONAL EXPERIENCE

Blackline [Senior Product Manager]

May 2023 – Present

- Owned end-to-end product strategy and roadmap for Intercompany — consolidating **4+ previously independent products** into a unified enterprise suite; applied MoSCoW prioritization and Pendo usage analytics alongside support ticket analysis to identify high-friction workflows and sequence the roadmap for maximum user impact.
- Identified a critical accuracy gap in tax rate management — users manually maintained tax tables, generating recurring support tickets and compliance risk — and drove integration of real-time tax engine APIs; architected a **multi-vendor model** enabling customers to choose their preferred tax engine, which became a key product differentiator, was **adopted by all new enterprise customers post-launch**, and directly contributed to closing **2 enterprise deals worth ~\$2M in ARR**.
- Delivered a compliant invoicing solution via third-party vendor partnership and introduced self-service invoice configuration for implementation consultants, **reducing configuration time from weeks to days** and cutting post-sale onboarding effort across enterprise deployments.
- Defined and tracked OKRs for the Intercompany suite, including north star metrics around reduction in manual reconciliation steps, tax error rates, and implementation cycle time — ensuring the team maintained clear, measurable goals aligned with business outcomes each quarter.
- Scoped and shipped an **AI-powered contextual chat feature** that delivered precise, workflow-aware answers to user queries directly within the platform; the feature drove a **50%+ reduction in inbound support tickets**, enabling the support team to redirect capacity toward complex, high-value customer issues.
- Authored comprehensive PRDs and functional specs in Confluence; translated requirements into Jira epics and user stories, facilitating sprint planning and backlog grooming with engineering to maintain predictable delivery cadence.
- Defined API contracts and integration requirements for third-party tax engine and invoicing vendors, bridging product and engineering teams to ensure technically sound, extensible integrations with minimal rework.
- Partnered with UX to define information architecture and drove wireframe iterations in Figma, ensuring designs reflected real user workflows validated through **structured interviews and stakeholder workshops across US, UK, ANZ, and India**.
- Defined feature-level success metrics and KPIs to measure adoption, error reduction, and time-to-complete for key workflows; used findings to inform subsequent roadmap iterations.
- Conducted competitive analysis across the intercompany and tax compliance landscape to identify market gaps and strengthen product positioning; findings fed directly into roadmap decisions.
- Presented quarterly roadmap reviews and feature outcomes to **VP-level stakeholders**, aligning cross-functional teams on priorities, surfacing trade-offs, and securing buy-in for long-term platform investments.
- Built demo narratives and GTM assets in partnership with Sales and Pre-Sales, enabling teams to independently showcase Intercompany capabilities and contributing to faster deal cycles and improved win rates in enterprise evaluations.

MarketXpander Services Pvt. Ltd [Senior Executive – Product Management]

June 2022 – May 2023

- Responsible for providing end-to-end CRM solutions, utilizing workflow technology to automate and streamline business processes across client engagements.
- Conducted gap analysis to evaluate as-is vs. would-be state of the business; designed end-to-end solutions and confirmed technical feasibility prior to development.
- Obtained stakeholder approval and validation on developed solutions; understood context of different clients to suitably structure solution implementation.
- Maintained CRM tools best practice repository and provided end-user training and change management support on CRM systems and tools.

Aurus [Business Analyst – Product]

November 2021 – May 2022

- Performed requirement gathering through client interviews, brainstorming sessions, and elicitation workshops; documented findings in FRDs, BRDs, and Use Cases.
- Validated business requirements against data extracts from source owners to ensure accurate data ingestion; ensured compliance with university payment policies.
- Handled end-to-end flows of Transaction Processing and Switching Solutions; provided assistance to payments team members as directed by management.

Neeyamo Enterprise Solution [Implementation Lead / Product Manager] July 2018 – November 2021

- Served as the **sole PM** across 3 products — Ticketing Platform, Attendance & Leave Management, and Master Data Management — owning the full product lifecycle from discovery and PRD writing through development, UAT, and go-live for **50+ enterprise clients** with a combined user base of **~5,000–6,000 employees**.
- Identified a critical operational gap — client employees were raising HR and payroll queries over email with no tracking, accountability, or SLA visibility — and led the **0-to-1 build** of a structured ticketing platform serving both internal ops teams and 50+ enterprise clients; replaced a fragmented email workflow with a fully auditable, SLA-driven system.
- Shipped a full feature set including ticket creation & tracking, auto-assignment to ops teams, SLA monitoring, escalation & notification workflows, manager-level reporting dashboards, and a self-service FAQ module — **reducing average resolution time from 7 days to 2 days** and handling **~100,000 tickets annually** across the client base.
- Drove measurable operational outcomes post-launch: **100% ticket visibility and auditability** replacing untracked email threads, significant improvement in ops team efficiency through auto-routing, and improved client satisfaction scores driven by consistent SLA adherence.

Attendance & Leave Management

- Designed and delivered an enterprise-grade Attendance & Leave Management system from scratch, replacing manual spreadsheet-based tracking; built configurable leave policies, shift management, and real-time attendance dashboards tailored to multi-country, multi-entity payroll workflows across enterprise clients.
- Integrated the system with downstream payroll processing pipelines to ensure accurate, timely data flow — **eliminating manual data reconciliation** between HR and payroll teams and reducing payroll errors caused by attendance discrepancies.
- Created detailed PRDs, BRDs, and FRDs for all 3 products; utilised Jira for user story management and sprint planning, and conducted structured UAT sessions with early adopter customers to validate product quality and market fit before each release.
- Conducted thorough market and competitive analysis to identify feature gaps and opportunities; engaged early adopter customers through MVP feedback sessions to ensure product decisions were grounded in real enterprise use cases.
- Led end-to-end implementation, configuration, go-live, and hypercare for new client onboardings — ensuring smooth transitions, high adoption, and customer satisfaction across all 3 product lines.

EDUCATION

Bachelor of Engineering in Electronics and Communication — D.Y Patil College of Engineering August 2014 – June 2018

ADDITIONAL INFORMATION

Certifications: Certified Scrum Product Owner

Key Projects: Intercompany Suite (Blackline) | AI Chat Feature | Tax Engine Integration | Ticketing Platform | MDM
